1. Read the given passage carefully:

Leopards are majestic wild cats with beautiful spotted coats. These spots help them blend in with plants and shadows. Since leopards are one of many wild cat species with spots, it is pretty easy to mix them up with other spotted wild cats, especially jaguars and cheetahs. Like most wild cats, leopards are solitary animals. African leopards climb trees to avoid predators that hunt in groups, such as lions and hyenas. The many subspecies of Asian leopards climb trees to avoid tigers, which are much larger. Leopards wait for their prey. After catching prey, a leopard often drags it high up in a tree so that other predators won't get it. You might be surprised to know that leopards are good swimmers. They are also pretty fast runners. They can reach the speed of 36 miles per hour and make leaps as much as 20 feet long and 10 feet high. Even so, leopards rarely race after prey. They either wait in a tree, or silently stalk it, pouncing when the prey is close. A mother gives birth to two or three tiny cubs. She remains with them for the first few days. Then she hides them away while she hunts.

**Answer the following questions in your own words.**

1. Give the characteristic features of leopards.
